

## **CLOUD (AWS, AZURE, GOOGLE CLOUD, ETC)**

- **Manage integration with services on the cloud, often using orchestration software.**

## **CONTINUOUS INTEGRATION + DEPLOYMENT**

- **Manages scaling CI systems for testing infrastructure, decreasing time spend on test runs, and manages quick/easy deployment to production**

# DEVELOPER TOOLING

- **Manages creating and developing tooling to get a software project up and running on a computer for development.**
  - **Includes installing languages, datastores, project dependencies etc locally.**
- **Often uses some form of orchestration software**
- **Has to be able to handle a system in any state as developers may change settings at random**
